

Connectivity

GSM / GPRS Connectivity - CS7002

- HomeText SMS
- GPRS Reporting SIA/CID to OH2000-NETREC IP Receiver
- Voice Reporting (all panel protocols)
- Up/Download over GPRS or DATA Channel
- Primary/Backup Reporting/Dual

IP Connectivity - CS7050

- IP Reporting SIA/CID to OH2000-NETREC IP Receiver
- Supporting Premises Connect
- Up/Download over Ethernet
- Support for DHCP or Static IP address
- Primary/Backup Reporting/Dual

IP Receiver - OH NETREC

- IP Receiver (SIA/CID)
- Support for 100/1,000/10,000 connections
- Supporting VVMIQ
- Software Development Kit available
- Integrated into MASTerMind

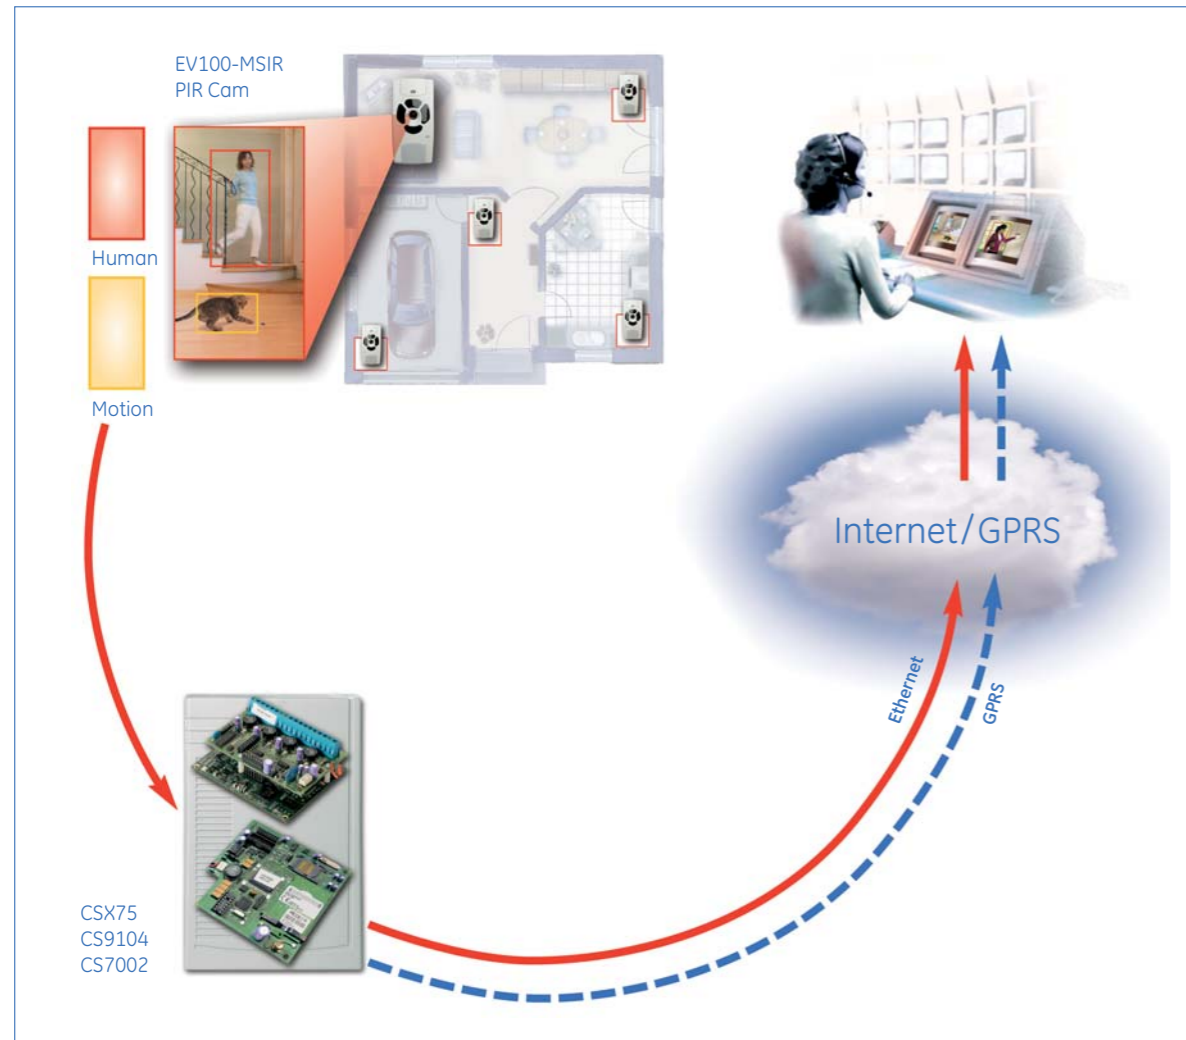

Residential Solutions

VVMIQ

Intelligent Video Verification

VVMIQ is a unique concept, because it integrates all the components you need for highly accurate on-site video verification into one solution. So the system not only lets you know immediately that there has been an intrusion, it also tells you what kind. That's because it uses a PIRCAM, a unique combination of PIR and camera, which can detect the difference between human movement and other motion.

When the system spots someone in an unauthorized area, the person is highlighted in a red box for quick identification. Other movement is highlighted in a yellow box. This means that the operator at the remote monitoring station can decide instantly if any further action needs to be taken. VVMIQ can cut false alarms dramatically and reduce unnecessary call-outs.

Even better than this is the fact that VVMIQ embeds its technology into GE Security alarm systems, like the CSX75. The VVMIQ module is a fully integrated system module like any other expander board, which makes it a system that's affordable and easy to install.

VVMIQ uses secure IP communication via an onboard Ethernet connection or a fully wireless GPRS solution. All events and video clips are transmitted to an OH2000-NETREC IP receiver or MAS (MAStErMind) automation software.

This concept makes VVMIQ the most complete and accurate video verification system you can buy.

PremisesConnect™

Remote Control Solution

PremisesConnect is the internet webportal to your security system. Through this portal you can contact your alarm system, control it or switch lights or appliances on or off and look into your home with a Network camera.

PremisesConnect uses patented communication mechanisms to enable consumers to interact with the system from a remote location, through the regular Web browser.

Consumers can control their system 24/7 & receive event notifications via e-mail:

- Remote arm/part arm/disarm/reset alarm
- Remote Lights/Appliance control (on/off)
- System status monitoring
- Personalized notifications of system events by email
- Selection of event notification
- View system history (unlimited events)
- View your IP Camera at home
